

Coding process work

Ideas: Kid lost trying to head home

AI chat helper → needs more inputs
so may be harder

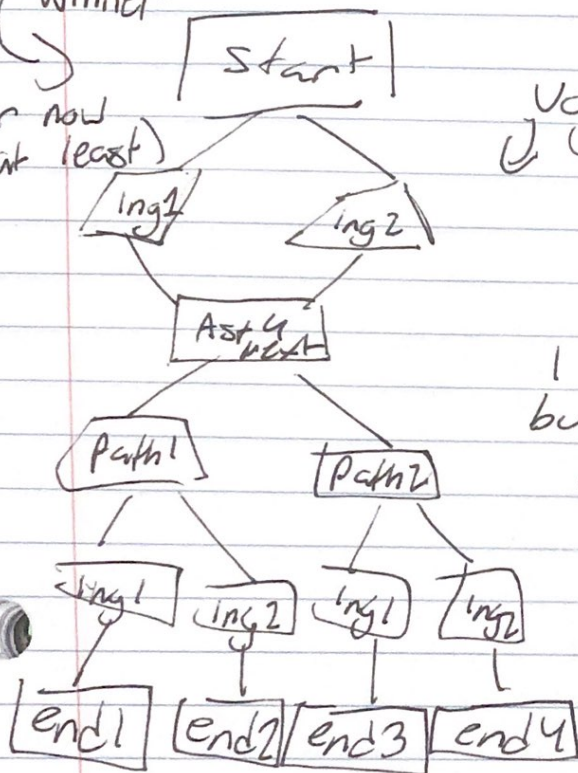

↖ don't think this is doable

Option 3 - Baking game where you pick between 2 ingredients

this the winner

(for now at least)

Vaguely like that with success/fail at the end

I like this option best but may be too linear or simple

Strawberry cake

↳ strawberries

egg

flour

Salt

Pick the wrong one

↳ how long to preheat
→ user inputs

350 is correct

↳ pick a topping
→ print choices at end

Slightly alter for other cake flavours
cutting last part out coz I don't think its necessary
